EXPERIENCE

Verisk — Jersey City, USA

Senior Data Scientist *July 2020 - Present*

- Anticipated growing demand for self-service analytics and envisioned a **conversational agentic AI interface** over Verisk's behavioral insurance dataset, enabling non-technical users to access benchmarking, retention, and loss-cost insights through natural language workflows; drove adoption across 3 carrier partnerships and internal product org
- Identified a critical gap in **point-of-quote fraud detection** and led the end-to-end development of a carrier-facing **fraud risk scoring platform** from concept to production; aligned product, engineering, and legal stakeholders, achieving 0.85 AUC and generating $2M in first-year revenue through prepaid custom model agreements
- Owned technical design and delivery of 50+ production **insurance behavioral analytics objects (CVAO)**, defining calculation methodologies and scaling phased attribute libraries across carrier switching, coverage gaps, BI/PD history, and vehicle-driver dynamics; generated $5M ARR across 12 carriers
- Translated CVAO behavioral objects into model-ready inputs for a production **insurance risk score** deployable as either a rip-and-replace or add-on carrier pricing model, owning the feature transformation pipeline; outperformed incumbent carrier plans 85% of the time
- Diagnosed **premium leakage** opportunities across 1.2M renewal policies and architected a scalable detection framework that recovered $2.1M annually while reducing carrier onboarding from weeks to same-day deployment.
- Spearheaded three insurance **data enrichment initiatives** across uninsured motorist, underinsured motorist, and driver-role claims data, resolving 45% of policy matching gaps across a 4.2M-record dataset and accelerating delivery timelines through cross-functional coordination across carrier, product, and engineering teams
- Built an **iterative RAG + LLM-human feedback pipeline** to standardize 1,500 traffic violation descriptions into 125 court-record classes, reducing manual processing time by over 75%
- Led a cross-functional team in the development of **construction area change model**, leading to accurate detection of area changes in 5.25 million commercial properties and a $700,000 reduction in on-site survey costs
- Developed an **internal Python module** and data store using an in-house entity resolution API to generate unique personIDs across auto insurance records, reducing false positives in insurance history data by 30%

The Kind Snacks Foundation — New York, USA

Analytics Intern *Jan 2020 – May 2020*

- Created a robust event driven ETL pipeline for the company’s ed-tech platform and wrote SQL queries to add raw
- event data from more than 10 sources to core business data tables hosted on AWS
- Built dashboards to **track key A/B testing metrics**, conducted funnel analysis and broke down metrics by various dimensions to understand growth levers for product

EDUCATION

Stevens Institute of Technology — New Jersey, USA

Master of Science in Business Intelligence & Analytics GPA - 4.0/4.0 *May 2020*

Relevant Coursework: **Multivariate Analysis**, **Experiment Design**, Web Analytics, Data Visualization, Machine Learning

Symbiosis International University — Pune, India

Bachelor of Technology in Information Technology *May 2018*

TECHNICAL SKILLS

Languages: Python, SQL, R
Gen AI: RAG, Prompt & Context Engineering, Agent Orchestration, Agentic AI Workflows, Statistical Modeling
Frameworks: AWS, Apache Spark, Airflow, XGBoost, Streamlit, SHAP, Git
Analytics & Experimentation: Product Analytics, A/B Testing, Hypothesis Testing, Regression
